Reason for Allowance

3. With regards to Applicants response dated 8/27/2004, Examiner has reviewed and considered Applicant's amendment and is hereby placing claims 44 – 46 & 48 in condition for allowance. The following is an Examiner's statement of reasons for allowance.

"... a client development interface, to interlace debug frames generated by the application development tool with application frames generated by the application executing within the application development tool, the application development tool being configured to generate debug frames in response to user interaction with the application development tool....wherein the application development tool populates a source and/or destination field of the debug frame with an invalid source and/or destination address", as best illustrated by figure 7, and in such a manner as recited in claim 44.

"...wherein the smart card development interface comprising a debug filter to identify debug frames within the received normal communication flow, the debug filter being configured to identify debug frames by an invalid source and/or destination address embedded within a source and/or destination field of the debug frame", as best illustrated by figure 7, and in such a manner as recited in claim 48.
